SUMMARY

Senior Ruby on Rails developer with 20 years experience offers full skills package from frontend to backend and devops. Familiarity with all versions of Rails and Ruby.

EXPERIENCE

Luthor AI

Mar 2025 – Aug 2025 | Ruby on Rails

Y-Combinator Fall 2024 startup, Luthor is the first AI-powered fractional Chief Compliance Officer, blending human expertise with automated workflows to keep financial firms SEC/FINRA-ready.

Led development of mission-critical features including a comprehensive content export system supporting multiple formats with PDF annotation overlays, a secure vault archiving system with cloud storage integration (Dropbox, Box), and an automated regulatory disclosures detection pipeline. Architected and implemented complex document processing workflows, AI-powered compliance analysis systems, and React-based PDF viewer components that process thousands of regulatory documents.

Developed specialized exporters for PDF, DOCX, Markdown, and Text formats with compliance report integration, created cloud synchronization services for enterprise archiving workflows, and implemented configurable pipeline systems allowing users to customize document analysis steps. Led integration efforts with external APIs including OpenAI, Chunkr OCR services, and multiple cloud storage providers while maintaining robust error handling and retry mechanisms.

WingTask

May 2021 – Sep 2021 | Ruby on Rails

WingTask is a mobile UI for the popular opensource command line task manager, Taskwarrior. WingTask is an app wholly created by me and represents my desire to build and launch my own app as well as trying to provide a useful addition to a CLI app that I use daily.

1bios

Dec 2018 – Apr 2021 | Ruby on Rails

1bios is a complex set of RubyonRails applications that serve different populations of users. It has a web admin area that is mostly Rails and React. It also has a mobile frontend that is React being served from a Rails API.

BidSketch

Feb 2015 – Dec 2017 | Ruby on Rails

Worked on an unreleased app called Docsketch which is an electronic signature signing app similar to HelloSign or RightSignature. Using React I created the ability for a person to drag and drop signing elements onto an uploaded document in order to specify what needs to be executed for the signing.

TaxJar

Dec 2014 – Dec 2015 | Ruby on Rails

Created a ruby client for the TaxJar API. The ruby client made it easy for other ruby devs to pull data from the TaxJar REST API, JSON was the data format returned and that was converted into ruby objects.

Econify

Oct 2014 – Dec 2014 | Ruby on Rails

Econify created an app for selling parts in an Ebay like market for the large machine industries. For instance, it allowed people who had spare parts for locomotive trains to sell parts to one another. I worked generally on fixing bugs and adding features to this marketplace app

SKILLS

RubyonRails

Responsive Design

Javascript / ES6

Hotwire

TailwindCSS

Atomic Design

Plum Co-Ownership

Sep 2021 – Dec 2023 | Ruby on Rails

Plum CoOwnership, Inc. is a venture-backed vacation co-ownership platform company that makes it 10x easier for people to form a group, buy a vacation home, and co-own it together gracefully.

Led technical development of Plum Web, a Rails 7.1 co-ownership real estate marketplace. Built core systems including the Dreamboard property preference engine, MLS-integrated Marketplace, and Proposals system for co-ownership management. Delivered RESTful APIs, real-time voting, and automated member onboarding for both B2C and B2B integrations.

Built custom JavaScript web components for dynamic property listings, responsive Tailwind CSS designs, and PostgreSQL database architecture with multi-tenant data isolation. Maintained code quality with 60+ test factories, StandardRB linting, and Brakeman security scanning. Used service objects, View Components, and modular routing following Rails best practices.

Migrated deployment to Kamal on Digital Ocean with CI/CD pipelines via GitHub Actions for automated testing and zero-downtime deployments to staging and production. Established secrets management with 1Password, automated backups, and monitoring with Airbrake and New Relic.
